OBJECTIVE

AI & Data Science undergraduate seeking an **AI Engineer / Machine Learning Engineer** role. Experienced in building scalable AI systems using **Retrieval-Augmented Generation (RAG)**, **FastAPI**, and **Large Language Models (LLMs)**. Strong background in backend development, API integration, and NLP-based solutions.

TECHNICAL SKILLS

Programming: Python, Java, JavaScript

Frameworks & Tools: FastAPI, Flask, Node.js, Express.js

AI/ML: TensorFlow, Keras, Scikit-learn, NLP, RAG, FAISS

Databases: MySQL, MongoDB, Vector Databases

Web Technologies: HTML, CSS, JavaScript, MERN Stack

Tools & Platforms: Git, GitHub, Postman, VS Code, Google Colab

Other Skills: RESTful APIs, JWT Authentication, Webhooks, Microservices Architecture

PROJECTS

Agent-Based Research Paper Analyzer (Ongoing)

Developed an AI-powered system to retrieve and analyze research papers using **arXiv** and **Semantic Scholar APIs**

Implemented **RAG pipeline using FAISS**, enabling semantic search across 1000+ research papers

Built an intelligent chatbot that reduces research analysis time by ~50% through summarization and comparison

Designed scalable backend using FastAPI and REST APIs

Tech Stack: Python, FastAPI, FAISS, REST APIs

Lost and Found – University Management Platform

Built a full-stack MERN application with secure JWT-based authentication and role-based access control

Enabled real-time item reporting and tracking for improved campus efficiency

Designed RESTful APIs for seamless data communication between frontend and backend

Tech Stack: MongoDB, Express.js, Node.js, JavaScript

AI-Powered Complaint Logging System

Designed an automated conversational AI pipeline using **GPT-4o, Vapi, and n8n**

Processed and structured user grievances with **90%+ accuracy in entity extraction**

Implemented webhook-driven architecture for real-time synchronization with Google Sheets

Improved data validation and reduced manual processing effort by ~60%

Tech Stack: GPT-4o, Vapi, n8n, Webhooks, Google Sheets API

Web Scraper

Developed a Python-based web scraper using BeautifulSoup to extract structured data

Automated data extraction and parsing from HTML DOM elements, improving data collection efficiency

Tech Stack: Python, BeautifulSoup, HTML

Safe-Talk AI (Industrial Hackathon)

Built a multilingual conversational AI system with **speech-to-text and safety filtering**

Implemented a **multi-agent RAG system** for real-time, context-aware responses

Integrated **Groq LLaMA 3.1 model** for high-speed inference and response generation

Improved response latency and safety filtering efficiency in real-time applications

Tech Stack: Python, FastAPI, FAISS, Sentence Transformers, LLaMA, HTML, CSS, JavaScript

EDUCATION

B.Tech in Artificial Intelligence and Data Science

KLH University, Hyderabad (2023 – 2027)

CGPA: 8.41

CERTIFICATIONS

AWS Certified Cloud Practitioner

Automation Anywhere Certified Professional

Salesforce Certified Agentforce Specialist

GitHub Foundations

ACHIEVEMENTS & ACTIVITIES

SAC Member – Organized and managed large-scale college events

Cricket Coordinator – Led team coordination and event execution

Hackathon Participant – Built production-level AI conversational systems
